

CreNova Enables Advanced DVB2IP Feature on ALI Secure Chipset Based CreNova Zapper STBs

April 3rd, 2015

Seoul – Las Vegas

CreNova has chosen Ali's Secured Chipset solutions for its Advanced Security Zapper Set-Top-Boxes (STB) enhanced with DVB/PVR2IP features. These feature rich STBs allow users to stream live or recorded video content securely within the home network via Wi-Fi.

The new platforms based on Ali's chipsets are highly cost optimized to address a number of emerging and developing Digital TV markets and are providing cutting-edge security technologies and outstanding performance in Zapper STB segment. Different options including single tuner, dual tuner, combo (DVB-S2/T2) and hybrid boxes are all available as a complete product line offering.

These platforms can run applications on either IOS or Android operating systems - thereby providing features to deliver all desired options for customers up to date use behaviour.

CreNova provides IOS and Android Apps with advanced features.

- Streaming of Live TV
- Setting for Recordings
- EPG with extended Information
- Streaming of PVR contents from Harddisk
- Remote control
- All secured by CAS and DRM

"These next generation STBs will allow our customers worldwide to get the most out of the target hardware" says Metin Atalan, CEO of CreNova. "And that builds trust, satisfied and loyal end customers."

Demonstrations will be available at the NAB Show in the CreNova Booth, SU6905 (South Upper Hall

CreNova Multimedia is one of the earliest established STB companies in the world with smart technology and best usability. The team, which brings over 20 years of experience in the set-top-box market, is high-skilled in both software and hardware development. With headquarters in Seoul, South Korea and a branch office in Germany, the management and engineering team can react to worldwide market requirements and customer requests much faster and more efficiently. www.crenova.tv

About ALi Corporation
